

## Discovery of Rogue Access Point Location in Wireless Network Environments

5

### Abstract of the Disclosure

Methods, apparatuses and systems facilitating location or containment of  
rogue or unauthorized access points on wireless computer network environments.  
Embodiments of the present invention support one to a plurality of rogue  
10 containment methodologies. A first rogue containment type involves identification  
of the physical connection of the rogue access point to the wired network  
infrastructure and, thus, allows for disabling of that physical connection to contain  
the rogue access point. Other rogue containment methods involve wireless  
techniques for containing the effect of rogue access points. In some embodiments,  
15 the present invention provides methods, apparatuses and systems facilitating  
network location of rogue access points to determine whether one or more rogue  
containment methodologies should be applied.. As discussed below, the rogue  
location and containment functionality described herein can be applied to a wide  
variety of wireless network system architectures.
